The applicant has not provided any drawings and the entire rejection of the application is based on as best understood.

The applicant's information disclosure statement dated 2/23/2005 has been considered and a copy has been placed in the file.

The abstract is objected to for referring to a figure, specifically, "(Fig. 1)".

The substitute specification has not been approved by the Examiner for the following reasons:

1) The applicant has failed to provide headings. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.

- (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
  - (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
  - (i) DETAILED DESCRIPTION OF THE INVENTION.
  - (j) CLAIM OR CLAIMS (commencing on a separate sheet).
  - (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
  - (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).
- 2) Throughout the specification, the applicant refers to claims, which is improper;
- 3) The applicant failed to provide a statement stating that "no new matter has been added".

Claims 1-30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Is the "closure element" a pivoting closure or a sliding closure or the combination thereof? Where exactly is the drive assembly mounted to both the vehicle and "the closure element", i.e., door/closure? Specifically, how does the drive move the "closure element"?

Claims 1-30 are further rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. All of the claims are not readily understood. Phraseology such as "shifting movement", "shifting drive", "mounted movably"

(movably mounted?), "support console", "bearing region", "rotary bearing of the body", etc... are not readily understood by the Examiner.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

As best understood, claims 1-30 are further rejected under 35 U.S.C. 102(b) as being anticipated by DeLand (4,984,385). DeLand (4,984,385) discloses a vehicle comprising a controller (3pb and 4pb) for controlling the movement of a vehicle door (12), a shifting drive (202M), a bearing region (16, 18, 24 and 26, guide tracks), a console (20) mounting the shifting drive (202M), a cable push/pull system having pulleys (137, 152, 138, 238), a manual override, electrical connections (336), and a safety responsive for preventing injury during closing.
